The Basic Issues of the Development of the Lower Reaches of The Tumen River
(Summary)

Constraining Factors and Basic Issues for the Tumen River Area Development

1. Constraining Factors and Basic Issues

The development of the lower reaches of the Tumen River is constrained by several factors. These include geographical and environmental challenges, such as the uneven topography and the presence of natural hazards. Additionally, socio-economic factors, such as limited infrastructure, limited human resources, and financial constraints, also pose significant challenges to the development of the area. Moreover, there are issues related to the management of natural resources, such as water, forests, and minerals, which require effective planning and management to be exploited sustainably.

2. Basic Issues

The basic issues for the development of the lower reaches of the Tumen River are primarily related to the integration of economic, social, and environmental challenges. These issues require coordinated efforts and effective strategies to address them. The development should be sustainable and should consider the needs of the local population, while also meeting the demands of the global community.

3. Concluding Remarks

In conclusion, the development of the lower reaches of the Tumen River is a complex and challenging task. It requires a comprehensive approach that integrates economic, social, and environmental considerations. The development should be guided by a clear vision and well-defined goals, with effective implementation and monitoring to ensure its success.
