ENERGY COOPERATION IN NEA: RUSSIA-JAPAN PERSPECTIVES

B. Saneev,
Energy Systems Institute, SB of RAS, Irkutsk

Speech at the 3d Russia-Japan dialogue “New prerequisites and economic conditions for energy cooperation in Northeast Asia in the Russian Far East”
May 13, 2010, Khabarovsk

1. State of the art and main indices of the Russian fuel and energy complex (FEC)
2. Eastern vector of Russia’s energy policy (basic concepts)
3. Russia-Japan studies on energy cooperation problems between Russia and NEA countries
4. Prospects and conditions for development of mutually beneficial international energy cooperation between Russia and NEA countries
5. Conclusions
STATE OF THE ART AND MAIN INDICES OF THE RUSSIAN FUEL AND ENERGY COMPLEX
# ROLE OF FUEL AND ENERGY COMPLEX IN THE ECONOMY OF RUSSIA

RUSSIA’S ROLE IN ENSURING GLOBAL ENERGY SECURITY

- Russia concentrates 18% of the world proved coal reserves, 27% of the world proved natural gas reserves and 7% of the world proved oil reserves

- Russia produces (as of 2008):
  - Electricity - 1036 billion kW (5%)
  - Coal - 326 million t (5%)
  - Oil - 488 million t (12%)
  - Natural gas - 602 billion m³ (20%)

( %) – of the world production

- Russia is the largest exporter of fuel and energy products
EXPORT OF RUSSIAN FUEL AND ENERGY RESOURCES (2008)

Coal - 100 million t
Electricity - 21 billion kWh
Natural gas - 195 billion m$^3$
Oil - 243 million t

Export to NEA countries (2006)

Coal, total 16.4 million t
including:
  Japan 12.3 million t
  Republic of Korea 4.1 million t
Oil (China) 14 million t
EASTERN VECTOR OF RUSSIA’S ENERGY POLICY (BASIC CONCEPTS)
EASTERN VECTOR OF RUSSIA’S ENERGY POLICY

- National interests of Russia require intensification of its mutually beneficial cooperation with Japan, China, Korea and other countries in Northeast Asia

- Creation of new energy centers in East Siberia and the Far East will increase energy security of Russia, restore and strengthen broken fuel and energy ties between the regions and solve many important federal, interregional and regional problems

- Fast and large-scale development of energy sectors in these regions and penetration to the energy markets in Japan, China, Korea and other countries of Northeast Asia should be considered as a primary means of timely ensuring the appropriate positions of Russia in this strategically important region of the world

- Creation in the East of Russia and in Northeast Asia of a developed energy infrastructure in the form of interstate gas-, oil pipelines and transmission lines will decrease the cost of energy carriers, enhance reliability of energy and fuel supply to consumers in different countries and make easier the solution of environmental problems
EASTERN ENERGY POLICY AS AN INSTRUMENT FOR SOLVING URGENT PROBLEMS IN RUSSIA

Eastern energy policy of Russia, as part of Eastern economic policy, is not an end in itself, but an instrument for solving many principally important problems of federal, interregional and regional levels.

**General problems**
1. **Social** – increase of comfort, style, quality of people’s life in the eastern regions of Russia
2. **Political** – consolidation and integration of the RF entities, strengthening the unity of the economic and energy space of RF
3. **Geopolitical** – reinforcement of Russia’s positions in the world economic system, in the community of APR, Central and Northeast Asia countries
4. **Economic** – enhancement of the efficiency of functioning and competitiveness of the economy in the East of Russia, increase of provision with resources and accessibility to the remote areas of the country, creation of conditions for attraction of foreign investments and advanced technologies to Russia

**Energy problems**
1. Improvement of adaptability and reliability of energy and fuel supply to consumers
2. Increase of energy security of the country and regions
3. Perfection of territorial and production structure of the fuel and energy complex of the country and particularly its eastern regions
4. Increase of environmental security of the energy sector
5. Formation of transport and energy infrastructure in Russia’s East – oil and gas pipeline systems, transmission lines– and creation of common transport and energy space in Russia
RUSSIA-JAPAN STUDIES ON THE PROBLEMS OF ENERGY COOPERATION BETWEEN RUSSIAN AND NEA COUNTRIES
MASTER PLAN OF ENERGY DEVELOPMENT IN EAST SIBERIA AND THE FAR EAST TILL 2010-2015 TAKING INTO ACCOUNT THE EXPORT OF RUSSIA’S ENERGY RESOURCES TO THE APR COUNTRIES

From Russia:
- Energy Research Institute, RAS, Moscow
- Siberian Energy Institute, SB of RAS, Irkutsk

From Japan:
- Institute of Energy Economics, Tokyo

Participants of the project

STAGE 1 (1993-1994)
- Comprehensive study of the current state and prospects for development:
  - energy consumption and energy saving
  - resources
  - Asian energy market

STAGE 2 (1994-1995)
- Development of a comprehensive plan:
  - regional fuel and energy mixes
  - formation of a portfolio of investment projects, including inter-country projects
  - financial and economic assessment of investment projects
  - formation of measures and initiatives to facilitate implementation of the projects
CONSIDERED INVESTMENT PROJECTS AND THEIR NUMBER

PRODUCTION OF:
- oil - 8
- gas - 5
- coal - 5

PRODUCTION OF:
- electric energy - 5

MAIN AND EXPORT PIPELINES:
- oil pipelines - 3
- gas pipelines - 3

EXPORT HV TRANSMISSION LINES - 3

Total – 32, including:

- Export gas pipeline East Siberia – China with a capacity of 30 bln m³/year
- Export oil pipeline Irkutsk region – China with a capacity of 18-20 mln t/year
- Export transmission line East Siberia – China with a capacity of 20-25 bln kWh/year

©ERINA
MAIN RESULTS OF THE RUSSIA-JAPAN PROJECT 1993-1995

1. Development of oil and gas resources in East Siberia and the Far East to meet internal demands and to supply surplus hydrocarbons to the markets of NEA countries is the strategic priority of socio-economic development of Russia’s eastern region and provision of energy security in NEA.

2. The fundamental scheme of oil-, gas pipeline network and export oil-, gas pipelines in Russia’s East is suggested.

   The scheme of the gas pipeline network and export pipeline system in Russia’s East was later specified in the framework of joint studies between the Russian research society “Rosaziagaz” and the Northeast Asian Gas and Pipeline Forum, Japan (NAGPF project).

3. Promising coal deposits that are attractive for the Japanese market, potential electricity sources for Russian electricity export to Japan, China and other NEA countries are presented.

4. The mechanisms for implementation of the suggested measures on strengthening the energy cooperation in NEA are proposed.

The results of the Russia-Japan project were discussed in December 1996 in Moscow at the Russia-Japan round table organized by the Ministry of Economy, Ministry of Energy of the RF and Ministry of Foreign Trade and Industry of Japan.

BASIC CHARACTERISTICS OF THE TUGNUISK OPEN-PIT MINE (REPUBLIC OF BURYATIA)

Design capacity – 10 mln t/year

Coal:
  • hard of rank Д;
  • moisture content – 10%;
  • ash content – 18.3%;
  • calorific value – 5200-7600 kcal/kg;
  • sulfur content – 0.3-0.5%;

Coal mining in 2006 – 5.4 mln t
Coal supplies for export in 2006 – 3.5 mln t
BASIC CHARACTERISTICS OF THE ELGINSK DEPOSIT
(REPUBLIC OF SAKHA (YAKUTIA))

- Estimated resources - 14 bln t
- Proved reserves for surface mining - 2.1 bln t
  (Northwestern section)

Coal:
- hard of rank 2Ж, 2ГЖ
- moisture content - 7%
- ash content - 22-35%
- calorific value - 6700-6800 kcal/kg

Potential coal production and consumption:
- Production capacity of open pit-mine - 30 mln t/year
- Export: - concentrate for coking - 5 mln t/year
  (ash content – 9%)
- Steaming coal - 15 mln t/year (ash content – 14-16%)
- Domestic consumption - 3 mln t/year
PROSPECTS AND CONDITIONS FOR DEVELOPMENT OF MUTUALLY BENEFICIAL INTERNATIONAL ENERGY COOPERATION BETWEEN RUSSIA AND NEA COUNTRIES
CONSTRUCTION OF OIL PIPELINE EAST SIBERIA – THE PACIFIC

The explored and indicated reserves of Evenki AO and the south of Krasnoyarsk krai – 696 million t.
Crude oil resources – 45 million t/year

The explored and indicated reserves of Irkutsk oblast and the Southwestern Yakutia – 677 million t.
Crude oil resources – 22 million t/ year

The scheme of oil flows in East Siberia and the Far East.
THE RF GOVERNMENT APPROVED THE PROGRAM FOR CONSTRUCTION OF THE UNIFIED SYSTEM OF GAS PRODUCTION, TRANSPORTATION AND SUPPLY IN EAST SIBERIA AND THE FAR EAST ON THE BASIS OF POTENTIAL GAS EXPORT TO THE MARKETS OF CHINA AND OTHER APR COUNTRIES

Developers: Ministry of Industry and Energy of RF, JSC “Gazprom”, approved by the Order of Ministry of Industry and Energy of RF No. 340 of 03.09.2007

Natural gas flows in Russia’s East (Variant “Vostok-50”) – export of 50 billion m³ of natural gas to China and Republic of Korea

FEASIBILITY STUDY TO SUBSTANTIATE THE MOST PREFERABLE VARIANT OF LARGE-SCALE CONTINENTAL ELECTRICITY EXPORT FROM EAST SIBERIA AND THE FAR EAST TO CHINA

Customer: JSC RAO “EES ROSSII”, Developers: Research and Design Institutes

Export electricity supplies from Russia's eastern regions to China – 60-70 billion kWh in 2020
ELABORATION AND REALIZATION OF THE PROGRAM DOCUMENTS GOVERNING THE FEC DEVELOPMENT IN EAST SIBERIA AND THE FAR EAST (As of September 2007)

Concept and forecast of the long-term socio-economic development of RF for the time horizon to 2020 (being elaborated)

Energy strategy of Russia for the time horizon to 2020 (approved by the Government order № 1234-p in 2003), for the time horizon to 2030 (being elaborated)

Federal program «Economic and social development of the Far East and Trans-Baikal area for the time horizon to 2013» (at the approval stage)

Strategy of social and economic development of the Far East, Republic of Buryatia, Irkutsk and Chita oblasts till 2025 (the draft of specifications is approved)

General scheme of the gas industry development for the time horizon to 2030 (being elaborated)

General scheme of development of the oil and oil-product piped transport for the time horizon to 2020 (being elaborated)

General scheme of siting electric power industry installations for the time horizon to 2020 (the draft was approved at the Government meeting on 19.04.07)

Program of the long-term FEC development in the Far East till 2020 (being elaborated)

Program of creation of the unified system of gas production, transport and gas supply in East Siberia and the Far East with potential gas export to the markets of China and other APR countries (approved by the order of Ministry of Industry and Energy of Russia №340 on 3.09.07)

Program of oil refining development in the areas of East Siberia and the Far East (being elaborated)

Of particular significance at the current stage is consideration of interrelations and coordination of strategic developments in the FEC sphere that are at different phases of preparation and analysis.
IN THE FRAMEWORK OF THE ENERGY STRATEGY OF RUSSIA 2030

- The strategy for FEC development in East Siberia and the Far East up to 2030
- The study on prospects for electric power industry development in Russia up to 2030
- Development of heat engineering and heat supply systems in Russia up to 2030

ORDERED BY THE REGIONAL AUTHORITIES

- The concept of providing stable operation of FEC facilities and energy security of Sakhalin region up to 2020 – ordered by Administration of Sakhalin region
- The strategy for FEC development in Amur region up to 2010 and for the time horizon up to 2030 – ordered by Administration of Amur region
- The strategy for electric power industry development in Chukot Autonomous Area up to 2020 – ordered by Administration of Chukot AA and JSC “Chukotenergo”
- The strategy for FEC development in Irkutsk region up to 2010 and for the time horizon up to 2030 – ordered by Administration of Irkutsk region
INSTITUTIONS INVOLVED IN THE STUDIES:

Design institutions:

• Institute JSC “DalvostNIIproektugol” (Vladivostok)
• Institute JSC “Dalenergosetproekt” (Vladivostok)
• JSC “Gidroenergoprom” (Saint-Petersburg)
• Institute “RN-SakhalinNIPImorneft” LTD (Yuzhno-Sakhalinsk)
• JSC “Siberian Energy Center” (Irkutsk)

Research Institutes:

Source: Substantiating materials to “The Energy Strategy of Russia up to 2030”; authors’ estimates
RUSSIA – A MAJOR POTENTIAL EXPORTER OF HELIUM

- Natural gas of the Siberian platform is unique in the content of helium and ethane, which essentially increases *its consumer value*
- Natural gas of the Siberian platform contains more than 0.3% of helium and 5-7% of ethane
- The helium reserves in the gas fields of the Siberian platform are estimated at 8.6 billion m$^3$, or above 30% of the world helium reserves
- In the future Russia can be the world largest helium exporter
Consumption of primary energy resources in Russia makes up 970-980 million tce per year or 6.1-6.2% of consumption of energy resources in the world.
ENERGY-GDP RATIO FOR WORLD’S COUNTRIES (by the purchasing power parity)

Source: Energy Strategy Institute (Moscow), by the data of Rosstat
ENERGY SAVING POTENTIAL IN RUSSIA’S ECONOMY

The total energy saving potential makes up 360...430 million tce.

- Housing and public utilities: 6%
- Fuel and energy complex: 31%
- Agriculture: 3%
- Industry and construction: 26%
- Transport: 34%

Source: Energy Strategy of Russia 2030 *(approved by the Resolution No. 1715-p of the RF Government of November 13, 2009)*
MAIN DIRECTIONS OF ENERGY EFFICIENCY INCREASE IN RUSSIA:

- structural changes in the industry with a decreasing share of energy-intensive sectors and an increasing share of machine building;
- rational allocation of productive forces by region of the country;
- technical reconstruction and renewal of fixed assets;
- large-scale utilization of renewable energy sources;
- promotion of energy saving, etc.
THE RF ENERGY STRATEGY TARGET UP TO 2030 – INCREASE IN THE SHARE OF RENEWABLE ENERGY SOURCES IN THE TOTAL ELECTRICITY PRODUCTION FROM 0.5% TO 4.5%

Installed capacity of RES for decentralized consumers in the eastern regions will increase by 3.8 times

Fuel substitution 300-450 thousand tce/year

Annual saving $6-8 million
CONCLUSIONS
FIVE REQUIREMENTS FOR MUTUALLY BENEFICIAL COOPERATION IN THE FIELD OF ENERGY

1. Political will and serious intentions of participants to implement a specific energy project mutually beneficial for each country.

2. Coordination of economic and energy policy between the central, regional authorities and business of the countries in development of inter-country energy projects.

3. Comprehensive and system estimation of consequences (effects) of implementation of large-scale inter-country energy projects, particularly under high uncertainty of future development, economic risks and global challenges for the countries, regions and energy companies.

4. Generation of mutually acceptable mechanisms for implementation of inter-country energy projects (organizational, economic, legal and other mechanisms).

5. Development and implementation of the inter-country projects by the international team (at all the stages: from feasibility study and design works to their realization).
CONCLUSIONS

1. Elaboration of the science-based strategy of energy cooperation in NEA countries became a necessity.

2. Currently the main outlines of the energy cooperation in NEA are clear enough. The resource base of countries supplying energy resources and the energy markets of consuming countries have been properly studied. Intensive attention should be paid to the implementation mechanisms of coordinated actions of participants (countries, regions, companies) in terms of economic, legislative and other initiatives aiming to implement large-scale inter-country energy projects.

3. The research societies and energy companies of Russia and Japan should stimulate the work in this direction in order to make an appropriate contribution to solution of the problem significant for all the countries of the world.
Thank you for your kind attention!
